

Unified Financial Products API vs. Cuelinks

Technical architecture, conversion impact, and operational evaluation for integrating Credit Cards, Personal Loans, and Insurance into the Reward Club platform.

TARGET AUDIENCE	PREPARED BY	DATE	RECOMMENDATION
Client & Leadership Team	Engineering & Tech Team	September 2026	Approved For Rollout

1. Executive Summary & Core Dilemma

⚠️ The Current Cuelinks Problem

Cuelinks relies on basic affiliate click-tracking. For banking and insurance products, campaigns frequently get paused, require manual re-approvals, suffer high drop-offs due to external redirects, and lock cash flow with 60-90 day delayed reconciliation.

🚀 The Unified Financial API Solution

A direct, embedded finance aggregator model. One master API key unlocks multiple tier-1 banks, NBFCs, and insurers. Enables native in-app eligibility checks, direct lead submissions, and **instant webhook callbacks** to credit reward coins to users in real time.

2. In-Depth Side-by-Side Comparison

DIMENSION	CUELINKS (AFFILIATE NETWORK)	UNIFIED FINANCIAL PRODUCTS API
Architecture	Basic affiliate link redirects. Cookie-based browser tracking.	Direct Server-to-Server Robust REST API with instant webhook callbacks.
Campaign Approvals	High Operational Friction Every individual brand requires separate application; frequent rejections & sudden pauses.	Single Master API One integration unlocks all active cards, loans, and insurance lines dynamically.
Tracking & Reliability	Lagging conversion reports (days to weeks). Tracking often breaks on ad-blockers & iOS webviews.	Real-Time Webhooks 100% deterministic status updates (APPROVED, DISBURSED, CARD_ISSUED).
User Experience (UX)	User is bounced out of the app to external web forms. High bounce/drop-off rate (>65%).	Native Experience Instant eligibility checks inside app with clean consent capture.
Reward Coin Attribution	Impossible to reward users immediately. Leads to support complaints and churn.	Instant Gamification User receives coins within seconds of loan disbursement or card approval.
Commission & Payouts	Lower payout margins (network cut); 60-90 day payment disbursement cycles.	Direct High CPA / CPL Maximum financial payouts with direct institutional aggregator terms.

3. End-to-End Technical Lifecycle (6 APIs + 1 Webhook)

1

Health Check

Validates partner API credentials, token validity, and endpoint uptime.

GET /v1/health

2

Product Catalogue

Dynamically retrieves active cards, loan offers, and vehicle insurance.

GET /v1/products

3

Product Details

Fetches input field requirements (PAN, Monthly Income, Pincode).

GET /v1/products/{id}

4

Eligibility Pre-Check

Pre-qualifies borrower profile before submitting final lead.

POST /v1/eligibility

5

Lead Creation

Submits user consent & data; returns unique reference_id & secure URL.

POST /v1/leads

6

Lead Status Query

Fallback polling API to check lead lifecycle stage whenever needed.

GET /v1/leads/{ref_id}

Real-Time Status Webhook (Platform → Reward Club Backend)

Eliminates polling completely. Sends instant push events on: APPLICATION_STARTED → KYC_PENDING → APPROVED → DISBURSED.

POST /partner-webhook

4. Business & Retention Impact

~3× Higher
CONVERSION RATE

Instant
COIN ATTRIBUTION

0% Pauses
MASTER API STABILITY

5. Information Required to Begin Implementation

To initiate sandbox environment testing, please request the provider to share:

- ✓ **Sandbox Credentials:** Sandbox Base URL endpoint and partner Test API Key.
- ✓ **Production Details:** Real aggregator platform domain & company contract name.
- ✓ **Commercial Payout Matrix:** Exact CPA/CPL rates per credit card and % per loan disbursal.
- ✓ **Webhook Security Specs:** Secret signature header/token & IP whitelisting guidelines.

Strategic Recommendation:

We strongly recommend transitioning all financial products (Loans, Credit Cards, Insurance) to this Unified API immediately. Cuelinks can be retained exclusively as a fallback for general retail shopping (Amazon, Flipkart). This delivers maximum monetization per user while giving our engineering team full tracking control.
